## A proposito del progetto

"It is Better to Give and Regret, than to Not Give and Be an Enemy"

Today's children now prefer technological devices such as phones, tablets and computers as toys. The reason for this is, of course, that parents introduce their children to technology at a very early age. However, if parents do not offer technology to their children, children will not demand it. Actually, children wants Love, Attention, Trust, right to speak from their parents. They want to play games, paint, spend quality time with their family and peers.

Drawing boundaries in a healthy way, enabling self-actualization through respectful and loving communication with the child is a very important gain, for the child and family, and then for the society. "What Does the Child Want?" With the project, we wanted to prepare a healthy future and allow them to discover their talents.

In short, we wanted to be a partner in these achievements by planning activities that will help parents hear their children's voice.

### **OBIETTIVI**

Goal 1: Reducing the daily use of technological gadgets.

Goal 2: To enable him/her to establish social relations with his/her peers.

Goal 3: Making decisions, researching, observing, establishing a cause-effect relationship.
